JANESVILLE AREA 2005 - 2035 LONG RANGE TRANSPORTATION PLAN

2005-2035 Janesville Area Long Range Transportation Plan

Janesville Area Metropolitan Planning Organization 18 North Jackson Street Janesville, Wisconsin 53545

Prepared by: Janesville Area MPO City of Janesville Community Development Department

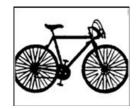

Brad Cantrell, Community Development Director Duane Cherek, Planning Services Manager Alexis Kuklenski, MPO Coordinator Matt Anderson, Associate Planner Julie Esterl, Planning Assistant Tera Barnett, Secretary

Final: May 10, 2006

MPO ORGANIZATION

The Janesville Area MPO includes the following units of government: City of Janesville, City of Milton, Rock County, and the Towns of Harmony,

Janesville LaPrairie, Milton and Rock. The work of the Janesville Area MPO is directed by a Policy Board which i

I. SUMMARY

The 2005 - 2035 Janesville Area Long Range Transportation Plan (LRTP) identifies the Janesville Area Metropolitan Planning Organization's (MPO) existing transportation conditions and those areas where improvements are needed to adequately provide a cost effective and efficient transportation system over the next 30-years. A multimodal combination of capital investment and infrastructure improvement projects should maintain existing levels of transit service, preserve existing roads, and provide for new major roads and bicycle connections to the highest growth sectors of the planning area.

The 2005 – 2035 Janesville Area MPO Long Range Transportation Plan is organized into the following sections:

- **Introduction** outlines the MPO's transportation planning process, the adopted land use plan, and the public participation process used for developing and reviewing transportation documents.
- **Transit** identifies transit issues, existing operating characteristics, safety, projected conditions and funding sources.
- Bicycle and Pedestrian outlines planning criteria for developing bicycle and pedestrian
 facilities, existing conditions, proposed facilities, safety and education policies, implementation
 and funding.
- Streets & Highways summarizes existing conditions of the Janesville Area MPO's road network, safety, travel demand and system deficiencies status, and project recommendations and funding requirements for 2005-2035.
- Freight identifies freight issues, existing facilities, and proposed facilities.
- **Environmental Justice** identifies concentrations of minority and poverty populations and examines the impacts of the recommended projects on those groups.
- **Implementation** identifies the status of the major projects recommended in the last plan, the, funding requirements and sources to implement recommendations, and implementation plan for preferred alternative.

The Janesville Area MPO's 2005-2035 Long Range Transportation Plan has an overall transportation goal of developing and maintaining an increasingly energy efficient transportation system which includes and integrates all modes of travel and provides for the safe and effective movement of people and goods, while optimizing the financial resources of the communities. This goal reflects the MPO's focus on efficient and integrated local transportation planning.

II. PLAN RECOMMENDATIONS

The recommendations identified in each section of the long range plan focus on maintaining the existing levels of service for the transit system, increasing opportunities for bicycle and pedestrian travel, and alleviating existing and projected street congestion through a combination of reconstruction, new construction, and rehabilitation projects. Specific recommendations for each mode are listed on the following pages.

Approval of the Long Range Transportation Plan does not constitute a commitment by the MPO or its member jurisdictions to complete the recommended projects. Prior to a projects implementation and funding, it must be reviewed and approved by the responsible jurisdiction(s).

TRANSIT

The Transit Element of the long range plan focuses on the existing conditions and forecasts future revenue and expenses for the fixed route bus system based on existing levels of Federal and State operating and capital assistance. The plan recommends maintaining existing service levels while continually evaluating opportunities to expand or restructure service to meet the needs of passengers trying to reach the area's major employers and commercial centers. The plan does not recommend any major alterations to public transit service, as it is expected that route revisions and service level alternatives will continue to be assessed through the Transit Development Plan and special study process. In general, public transit is expected to continue to provide less than 1% of all trips taken in the urban area, based on commuter data from the 2000 U.S. Census. Despite the small percentage of the total trips served, it provides a means to work, school, and other destinations that is both necessary and beneficial for the transit dependent population.

Transit Recommendations

- Provide efficient, cost effective fixed route service with a focus on the transportation needs of senior citizens, disabled persons, children, and major employment centers.
- Maintain service to high transit potential areas in the City.
- Evaluate need for expanding or restructuring service to reach newly developed residential and commercial areas through the TDP process.
- Explore options for cost-sharing with corporations or other jurisdictions to provide service to major employment centers not currently served by transit.
- Implement capital improvements for bus replacements and rehabilitation, shelter and sign replacements, and garage facilities.
- Construct a new transit garage and maintenance facility.

Over the next 30 years, the Janesville Transit System is expected to continue providing citywide service with a focus on school and work trips for transit-dependent populations. Service levels, funding availability, and ridership demographics will continue to be monitored regularly over the planning period through the TDP process. Changes to the system will occur as local support, federal and state funding, and private participation affect the overall scope of transit service within the city and state.

BICYCLE & PEDESTRIAN

The bicycle route system proposed for the Janesville Area MPO uses off-street and on-street facilities to provide access to a large portion of the MPO planning area. Multi-use trail segments take advantage of riverfront property, abandoned rail corridors, and the public greenbelt system. The focus of the multi-use trail system is to connect major recreational facilities and provide key linkages for an on-street bicycle transportation network. The overall goal is to develop a comprehensive off-street and on-street bicycle network that provides direct routes to major residential, employment, educational and recreational activity nodes and connect to the Rock County trail system.

The bicycle facility development strategy consists of on-street improvements that compliments the existing and proposed off-street trail recommendations, and is aimed at creating a bicycle facility network within the MPO. The on-street recommendations will occur primarily with street resurfacing and reconstruction projects, while the off-street recommendations are split into two phases, with general completion dates falling between 2006-2015 for Phase I, and 2016-2035 for Phase II. The recommendations for the proposed on-street network are shown in the Bicycle and Pedestrian Element in Figure III-1, while Figure III-2 details the proposed off-street projects.

Bicycle & Pedestrian Recommendations

The on-street recommendations aim to identify the most direct and safe routes for bicyclists of all abilities. The recommendations formally identify an on-street network through the creation of an on-street bike route map, and where feasible, integrate bicycle facilities into existing major streets and future construction projects. An additional priority project related to the on-street bicycle network is to develop a *bikes-on-buses* program with the Janesville Transit System, which would allow passengers to mount their bikes onto the bus. Bike carriers would allow commuters to use both the bus and their bikes for their daily commute.

As mentioned above, the off-street trail recommendations have been divided into two phases. The proposed projects for each phase are shown in the Bicycle and Pedestrian section in Figure S-1, and listed in Table S-1, along with the jurisdictional responsibility. The focus of the first phase is to complete the existing off-street trail network by 2015. This includes completing the Fisher Creek trail from Rockport to Parker High School, the Rock River Trail through downtown Janesville and extending the Spring Brook Trail to the Northeast Regional Park. The phase two projects are aimed at completing the off-street trail loops, one on the east side of the Rock River, one on the west and one on the south. The second phase also identifies longer term regional projects, such as connections between Janesville and Milton, and Janesville and Beloit, which will require the efforts of multiple jurisdictions.

The pedestrian facility recommendations aim to continue providing for pedestrian needs by installing sidewalks with new development and in existing areas that do not have them. Safety improvements are recommended for intersections that have had multiple accidents, both bicycle and pedestrian, in the last ten years. Intersection improvements may range from physical reconstruction projects to improved signage and pedestrian activated signalization.

In addition to recommendations for the physical improvement of the bicycle and pedestrian environment, safety and education play an important a role in upgrading this element of the transportation network. Safety is primarily addressed through the physical design and maintenance of the bicycle and pedestrian

facilities, while education can be addressed in person with bicyclists, motorists, parents, peers, teachers, law enforcement official, and many others.

The interest level in the new bicycle trails reflects a demand by the public for not only for recreational opportunities but also for transportation opportunities to reach the park system, commercial and employment centers, downtown and other public facilities within the MPO. The plan recommends extensions to the off-street trail system and the creation of a connective on-street bike lane network that will improve access to commercial centers and the high growth residential districts over the next 30 years. The proposed off-street bike trails are listed in Table S-1 and illustrated in Figure S-1. The on-street network is also shown in Figure S-1. The plan recommends that the proposed bike lanes be added in conjunction with scheduled roadwork, which makes the implementation schedule variable.

TABLE S - 1 FUTURE OFF-ROAD TRAILS

Map ID	Project Name	Timeframe*
City of	Janesville Projects	
Phase	I	
1	Ice Age Trail - Racine to Wilson, Union to Van Buren	2006-2015
2	Westside Fisher Creek Trail	2006-2015
3	Valley Park Connector	2006-2015
4	Jackson School Connector	2006-2015

FIGURE S - 1 PROPOSED BICYCLE NETWORK

STREETS & HIGHWAYS

The Streets & Highways Element of the long range plan updates the 2020 Long Range Transportation Plan and focuses on the mode that provides the majority of delivery and personal trips made within the planning area. According to 2000 U.S. Census results, 95% of work based trips are made by commuters driving alone or carpooling. 1994 trip survey data from WisDOT indicate that automobiles and light trucks make up 90% of vehicle trips with the remainder made by heavy trucks. Both results reflect the high number of personal vehicle trips made in a relatively compact metropolitan area, and the need to create a system that is conducive to automotive travel.

Existing street and highway data, such as the functional classification system, and street standards are provided in the plan, along with inventories of traffic controls and crashes. The main focus of the highway section, involves the level of service deficiency analysis, which forecasts where capacity and congestion problems will occur, based on population, housing, and employment projections for the study area. The majority of significant future capacity deficiencies are projected for Janesville's eastside, including the I-39 corridor, and sections of USH 14, Milton Avenue, and STH 26. The recommended expansion projects create alternative connections, intended to meet the traffic demand expected by 2035. The recommended projects are illustrated in Figure S - 2 and listed in Table S - 2.

Streets & Highway Recommendations

- Construct a transportation system that is compatible with existing and future development patterns.
- Implement rehabilitation, reconditioning, and resurfacing projects to preserve the existing highway system.
- Implement capacity expansion projects to meet future growth and proactively relieve anticipated congestion (Projects listed in Table S-2).
- Continue to develop plans for alternate routes around the urbanized areas that will eliminate unnecessary through traffic and congestion.
- Continue planning and monitoring activities to maintain traffic data, and aid in the prioritization and funding of street and highway projects.
- Continue programming, financing, and traffic monitoring procedures such as pavement management, intersection studies, and traffic counting programs, to achieve the MPO's general transportation goals and objectives.

The goal of the recommended street and highway projects is to meet the future transportation needs of our growing community, while maintaining the road system in its current condition, or better. Continued growth along the urban area fringe and increased travel demand between the MPO and surrounding communities will also be an important transportation issue in the coming years. Construction of the recommended expansion projects are intended to have a positive effect on safety and congestion, and provide continued economic development opportunities throughout the MPO.

All of the projects that the MPO Policy Board has already reviewed and approved through the 2006-2011 Transportation Improvement Program (TIP) have been included in the LRTP as they are listed in the TIP, and make up the recommended projects for the first 7 years of the LRTP (2005-2011). Projects added beyond the first 7 years are new elements of the LRTP. The most significant projects scheduled for the first 7 years of the plan are:

- the Highway 26 bypass (project number 17) around the eastern edge of the City of Milton. The project is scheduled to begin construction in 2009 and conclude in 2014.
- the study of the costs and benefits associated with creating a west and southeast bypass around the City of Janesville (project number 55). The study examines the merits of three projects that have the potential to be implemented individually or as a group. One project is the expansion of Highway 11/14 from County Highway O to Highway 89. The other two projects examine the benefits of new connections; one between Highway 11 and Highway 11/14, the other is a north-south connection between the Highway 11 bypass and Highway 14.

Between 2012 and 2030 there are several projects recommended. However, these projects will need to receive approval from their sponsor jurisdiction(s) and committed funding before they can be implemented. The major projects scheduled for this period are:

- the expansion of I-39 to six lanes (project number 47) and the installation of noise barriers along the residential areas.
- a study of the options for the reconstruction of the Five Points Intersection (project number 53).
- the expansion of Town Hall Road to four lanes (project number 50).
- the expansion of County Highway G to four lanes (project number 44) in coordination with the Beloit MPO.
- a study of the costs and benefits of expanding either all or portions of Highway 14 to six lanes in the City of Janesville (projects 45 & 46).
- a study of the costs and benefits of expanding all or a portion of Highway 51 from Black Bridge Road to Russell Road to four lanes (projects 51 & 52).

Towards the later years of the plan, we will want to begin preparing for the next set of major improvements. Due to the difficulties associated with estimating needs 30 years out, these projects may overlap this planning cycle and the next. The major projects planned within the final phase are:

- the study of the benefits of creating a north side bypass connecting to I-39 using portions of Highway 14, Highway 51, Kidder Road and County Highway M (projects 57, 51, & 59) and its possible implementation. If the north side bypass is constructed, there is the potential to continue the connection to Highway 26 (project number 56), creating an eastwest corridor north of the Cities of Milton and Janesville.
- the expansion of Milton-Shopiere Road (project number 58) to create a north-south corridor on the east side of the MPO.

Type CP: CE: Committed Preservation Committed Expansion Long Range Expansion

PE C: Planned Expansion (Capacity Expansion)
US: Under Study

SR P: Short Range Preservation
PE NR: Planned Expansion (New Road)

LR E:

Note:
The long range preservation (2012-2035) will be addressed through each jurisdictions preservation budget. The specific projects will be identified as 2012 approaches. Some of the projects may also address safety concerns.

III. FREIGHT

The Freight Element is the Janesville Area MPO's first attempt at incorporating freight planning into its long range transportation plan. In light of this initial effort to comply with Federal requirements, the MPO has chosen to focus on collecting inventory and activity data on the MPO's freight network. This will establish a base from which future changes, plans and recommendations for the freight system can be evaluated.

Approximately 15.5 million tons of goods are shipped to and from Rock County each year. The moderate cost, reliable delivery time, and on-site delivery benefits associated with shipping by truck led to it being the preferred mode of transport within Rock County; 77 percent of all goods are hauled by truck and 23 percent travel

MAIN COMMODITIES MOVED

		Percent Of
Commodity	Tons	Total Tons
Transportation Equipment	3,271,511	22%
Secondary Traffic	2,148,542	14%
Chemicals	1,452,844	9%
Farm Products	1,436,616	9%
Total Tons	15,549,221	

by rail. The main goods carried to and from Rock County are transportation equipment, secondary traffic¹, chemicals, and farm products, as shown in the adjacent table. The majority of goods are traded within the state. Outside of Wisconsin, the Midwestern states are the county's dominate trading partner.

Locally, GM is the largest single generator of freight traffic. Each day GM produces approximately 400 truckloads of goods. These vehicles are either entering Janesville with deliveries or traveling between GM's plant, staging areas, and other suppliers. In addition, GM unloads about 55 boxcars a day.

Freight moving through the Janesville Area MPO is well served by truck routes and rail providers. The existing truck routes serve all the MPO's major commercial districts and provide connections to the major destinations within the region, such as Chicago, Milwaukee, and Madison. The importance of freight movement, combined with forecasted increases in both truck traffic and overall vehicle traffic make it important to consider the proportion of truck traffic expected on our roadways in our plans. The data gathered in this plan will give us a base from which to start future analysis and begin to make recommendations.

IV. ENVIRONMENTAL JUSTICE

The Environmental Justice Element identifies the areas within the MPO that have a high proportion of low-income and minority persons, and evaluates whether or not the negative impacts to those areas, resulting from the recommended projects, is disproportionate to the rest of the community.

In addressing environmental justice, the MPO has identified areas within the urbanized boundary with a significant low-income or minority population, and then analyzed and addressed, when appropriate, the impact of the recommended projects on the target groups. The City of Janesville was the only area to have census block groups with a concentration of low-income or minority persons². All of these areas are served by public transportation, and a majority have retail, recreation, schools and job opportunities, within their immediate vicinity, see Figures VI-2 A & B. Public transportation will take residents to medical

¹Traffic moving between warehouses and distribution centers.

² One block group within both the Town of Janesville and the City of Janesville had a concentration of minority persons, however further investigation indicated that this was most likely due to the presence of the Rock County Jail.

facilities, and other major destinations within an average of five to 20 minutes. With the exception of one potential project (the expansion of USH 14 to six lanes near the Milton Avenue intersection), the recommended projects do not disrupt the existing opportunities within each block group, see Figures VI-3 A & B. In summary, the environmental justice analysis did not indicate that recommended projects would cause the low-income and minority persons to have an unfair number of negative impacts imposed upon them.

V. IMPLEMENTATION

Recommendations in the long range plan will be implemented over the planning period through planning and monitoring activities such as local budgets, capital improvement programs, land use planning, pavement management systems, and the ongoing process of data collection and analysis. The responsible jurisdiction(s) will need to review each project and approve its funding prior to a projects implementation.

The Elements contained in the plan have been designed to meet the goals and objectives that Janesville, Milton and the surrounding townships in the planning area have been striving to maintain in regards to transportation planning over the past two decades. In addition, the overarching goals and objectives of the plan address the seven factors that long range plans are required to consider as part of the metropolitan planning process, as outlined in the 1998 Transportation Equity Act for the 21st Century (TEA-21).

The seven planning factors are:

- 1. Support the economic vitality of the metropolitan area, especially by enabling global competitiveness, productivity, and efficiency.
- 2. Increase the safety and security of the transportation systems for motorized and non-motorized users.
- 3. Increase the accessibility and mobility options available to people and freight.
- 4. Protect and enhance the environment, promote energy conservation, and improve quality of life.
- 5. Enhance the integration and connectivity of the transportation system, across and between modes, for people and freight.
- 6. Promote efficient system management and operation.
- 7. Emphasize the preservation of the existing transportation system.

The revenues needed to implement the projects recommended throughout the plan are expected to be available, should funding levels remain consistent with historical trends.

Implementation of the plan, continued evaluation of its elements, and updates of the information contained within the plan will provide the Janesville Area MPO with extensive opportunities over the next 30 years to meet its transportation planning goal of a safe, effective, and energy efficient transportation system for all modes.
